Why use Zenodo?

- **Safe** — Your research is stored safely for the future in CERN's Data Centre for as long as CERN exists
- **Trusted** — Built and operated by CERN and OpenAIRE to ensure that everyone can join in Open Science
- **Citeable** — Every upload is assigned a Digital Object Identifier (DOI), to make them citable and trackable
- **No waiting time** — Uploads are made available online as soon as you hit publish, and your DOI is registered within seconds
- **Open or closed** — Share e.g. anonymized clinical trial data with only medical professionals via our restricted access mode
- **Versioning** — Easily update your dataset with our versioning feature
- **GitHub integration** — Easily preserve your GitHub repository in Zenodo
- **Usage statistics** — All uploads display standards compliant usage statistics

About Lexibank

To conduct thorough cross linguistic comparisons, we must gather linguistic data, ensuring maximum comparability across individual data points, resources, and language families. Despite the substantial increase in digitally accessible data for the world's languages in recent decades, we still face a significant scarcity of comparable data. The situation is compounded due to past data collections not being archived for long-term durability. As a result, quite a few datasets have disappeared from the internet and are no longer available now. Inspired by the GenBank database, where scholars can deposit nucleotide sequences publicly, we have created Lexibank, a collection of cross-linguistic datasets in standardised formats, which offers access to word forms, sound inventories, and lexical features for more than 2,000 language varieties derived from 100 individual high-quality datasets.
